

Chapter 7

Domain Controller and Active Directory Management

Activity Known Issues

Lab	Issues
7-5	Step 9: After completing steps 10 and 11, the command hangs and the server never is installed as a DC. In this step, when you are prompted for credentials, enter them as 411dom1\administrator instead of just administrator. That solves the problem. If you experienced the problem, you may need to perform some steps to clean up 411Server1 and 411Server2. Follow the steps outline here: https://support.microsoft.com/en-us/kb/2737935
